

Dakota Coppage

Software Engineer II

Wilmington, DE | dakotakcoppage@me.com | [linkedin.com/in/dkc86](https://www.linkedin.com/in/dkc86) | github.com/devvJS | npmjs.com/~devvjs

PROFESSIONAL SUMMARY

Software Engineer II at JPMorgan Chase with 4+ years of full-stack development experience building production web applications, internal tools, and developer-facing CLIs. Proficient in JavaScript, TypeScript, React, Node.js, and Ruby on Rails, with hands-on work across CI/CD pipelines, containerized deployments (Docker), and AI-assisted development workflows. Self-directed builder shipping multiple production indie projects spanning web, mobile, and CLI tooling. Owner-operator background brings a product mindset, strong ownership, and customer focus to every engineering decision.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Ruby, HTML5, CSS3, SQL, Bash

Frameworks & Libraries: React, Redux, Next.js, Node.js, Express, Ruby on Rails, React Native, Expo, Tailwind CSS, Styled Components, Bootstrap, Semantic UI, Framer Motion

Cloud, DevOps & Tooling: Docker, CI/CD, Git, GitHub Actions, Gitflow, Vercel, AWS, Linux/WSL/Ubuntu, npm, Jest

Databases & Backend: PostgreSQL, SQLite, Supabase, Sanity, REST APIs, OAuth, Stripe, Webhooks

AI & Developer Tooling: Anthropic Claude API, Claude Code, Gemini CLI, OpenAI Codex, prompt engineering, MCP servers, agentic workflows

Practices: Agile/Scrum, code review, unit & integration testing, accessibility (WCAG), responsive design, technical documentation

PROFESSIONAL EXPERIENCE

Software Engineer II | JPMorgan Chase & Co. | Wilmington, DE | *January 2025 – Present*

- Develop and maintain production features across full-stack web applications serving internal business lines, contributing to roadmap planning and technical design reviews.
- Collaborate with cross-functional teams (product, design, QA) to deliver features within Agile sprint cycles, participating in code review and pair programming to maintain code quality.
- Apply CI/CD best practices and containerized deployment workflows (Docker) to ship changes safely, repeatably, and with minimal disruption to downstream consumers.

Software Engineer | JPMorgan Chase & Co. | Wilmington, DE | *September 2022 – January 2025*

- Built and maintained React-based front-end features and Node.js services as part of enterprise-scale applications used across internal teams.
- Authored unit and integration tests, performed code reviews, and partnered with senior engineers on architectural decisions to improve maintainability and performance.
- Promoted to Software Engineer II in January 2025 in recognition of consistent delivery, technical growth, and increased ownership of production systems.

Junior Software Developer | BDSA | Remote (Colorado, US) | *January 2022 – June 2022*

- Developed an internal data-processing application focused on user-friendly workflows and operational efficiency for back-office data review.

- Worked across the stack (React on the front end, REST APIs on the back end) and contributed to feature specifications and QA cycles.

Owner / Master Barber | **True Barber Co.** | Denver, CO | *August 2012 – January 2022*

- Founded and operated an independent service business for 9+ years; managed P&L, scheduling, marketing, and a recurring client base. Transferable ownership, communication, and customer-focused problem-solving experience that informs product and engineering decisions today.

SELECTED PROJECTS

groundup-cli: AI-powered Node.js CLI that takes developers from empty folder to scaffolded, deployed project via an interview-first workflow (npmjs.com/package/groundup-cli)

- Published to npm; integrated multi-provider AI (Anthropic Claude, Google Gemini, OpenAI Codex) with live API validation and a single-source-of-truth model registry; ships a 'groundup update-models' command for ongoing model maintenance.
- Designed and implemented a full pipeline (interview, build, deploy) with per-phase Git snapshots, approval gates, retry-with-feedback loops, and abort/resume via persisted session state.
- Built a Vercel deploy stage with framework auto-detection and graceful fallback to manual steps; established a Gitflow release process with squash merges, prereleases, and beta tags on npm.

megs.me: Production e-commerce site for an independent artist; Next.js / TypeScript / Tailwind on Sanity, Stripe, Printful, and Shippo (megs.me)

- Designed and built end-to-end: headless CMS, checkout, on-demand fulfillment integration, transactional email (Resend), and a three-mode site config (coming-soon / live / maintenance) deployed on Vercel.

bükmärk: Cross-platform mobile app for bookstore discovery; React Native (Expo SDK 54) with Mapbox, Supabase, RevenueCat, and Zustand

- Built brand system, authentication flow, and an interactive map experience covered by 99 passing tests; configured EAS Build for distribution; styled with NativeWind.

The Night Borrower: Solo Unity HDRP psychological-horror game with companion Next.js promotional site (Framer Motion) deployed on Vercel (thenightborrower.com)

- Designed event-driven game architecture (static event bus, slot-based positioning, delta-compressed JSON saves) and shipped a production marketing site with devlog accordion and wishlist flows.

EDUCATION

Bachelor of Science, Computer Science, Southern New Hampshire University (*2026 – Present*)

Software Engineering Immersive, Flatiron School (*2020 – 2021*)
